

Omipa is a highly specialised manufacturer with 60 years of experience in the design and construction of complete extrusion and coextrusion lines for the production of sheet, foil, film and hollow profile, which we deliver to our customers located all over the world.

Our strength point is that the entire machine, from loading of the granule up to handling of the finished product, is entirely designed, manufactured and tested here at our company, which enables us to fully master the entire production process.

In addition to this, thanks to our staff of engineers and specialised technicians, we can provide rapid and competent after sales assistance, by supplying spare parts and arranging for customers' assistance both via modem and by sending our technicians on site, when necessary.

We are highly specialised in **production of hollow profile lines in PP** and up to now we have delivered all over the world more than 230 extrusion lines.

Main features:

- Useful width up to 3200 mm
- Thickness range 2 – 10 mm
- Use of recycled materials
- Coextrusion
